

# LAB DIRECTIONS for LAB 4/16/2015

## Based on Lesson Set 11

1. Create a folder named **Lesson Set 11**. Put all files you create for this lab in this folder.

### 2. ARRAY OF STRUCTURES.

Bring in the program from **Lesson Set 11 Source Code** folder named **array\_struct.cpp**.

- a. Fill in the code as indicated by the comments
- b. Compile & run your program using the same data as in the sample run below and then create a screen capture of your code running. Put your screen capture in a document named **Lesson Set 11 Screen Captures**.

#### *Sample Run:*

```
Enter this year's income for tax payer 1: 45000
Enter the tax rate for tax payer # 1: .19
Enter this year's income for tax payer 2: 60000
Enter the tax rate for tax payer # 2: .23
Enter this year's income for tax payer 3: 12000
Enter the tax rate for tax payer # 3: .01
Enter this year's income for tax payer 4: 104000
Enter the tax rate for tax payer # 4: .30
Enter this year's income for tax payer 5: 50000
Enter the tax rate for tax payer # 5: .22
```

```
Tax Payer # 1: $ 8550.00
Tax Payer # 2: $ 13800.00
Tax Payer # 3: $ 120.00
Tax Payer # 4: $ 31200.00
Tax Payer # 5: $ 11000.00
```

### 3. NESTED STRUCTURES.

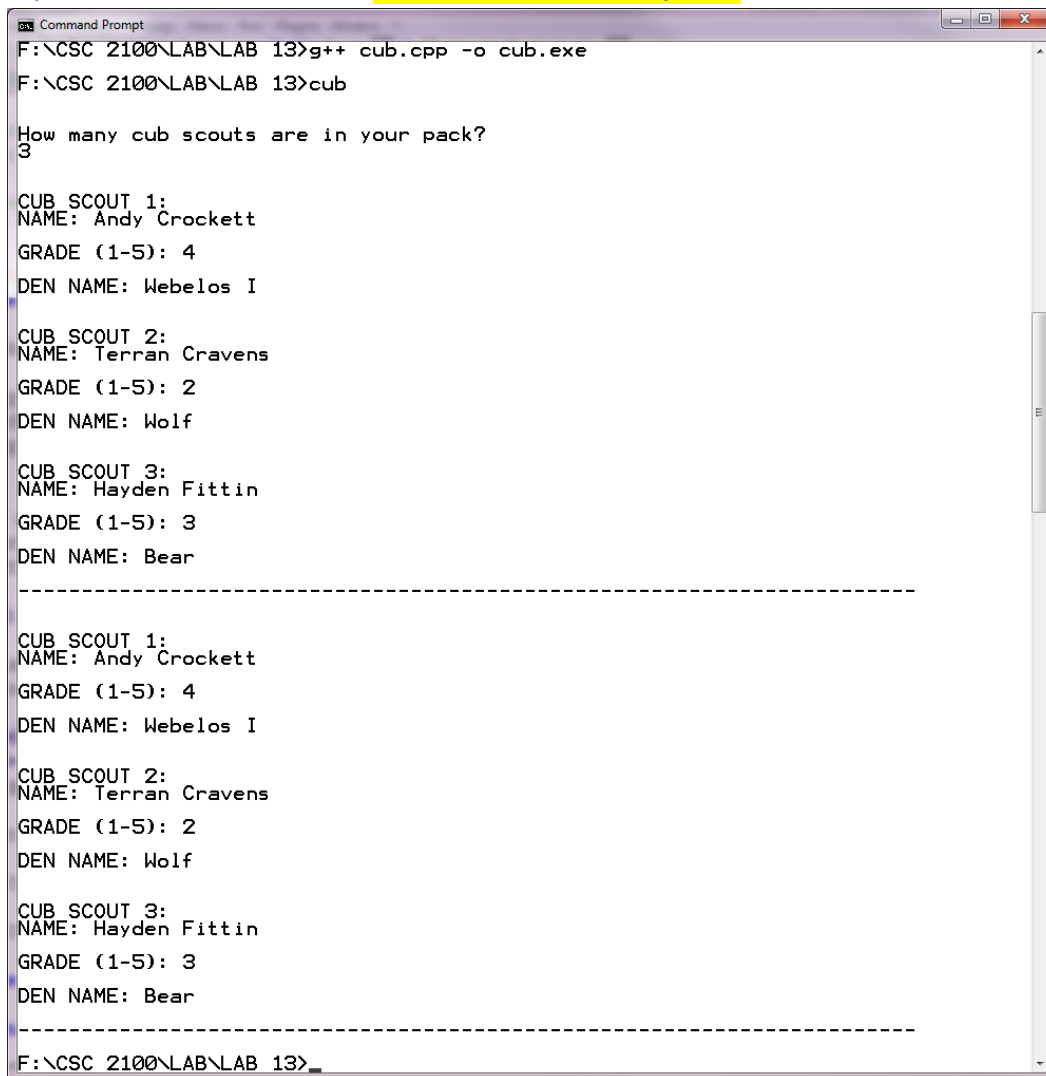

Bring in the program from Lesson Set 11 Source Code folder named **nestedRect\_struct.cpp**.

- a. Fill in the code as indicated by the comments.
- b. Modify the program by adding a third structure named **Results** which has two members: **area** and **perimeter**. Adjust the **Rectangle** structure so that both of its members are structure variables.
- c. Modify the program again by adding functions that compute the area and perimeter. The structure variables should be passed as arguments to the functions.
- d. After you complete a, b, & c, compile & run your program using the same data as in the sample run below and then create a screen capture of your code running. Put your screen capture in a document named **Lesson Set 11 Screen Captures**.

#### *Sample Run:*

```
Enter the length of a rectangle: 9
Enter the width of a rectangle: 6
The area of the rectangle is 54.00
The perimeter of the rectangle is 30.00
```

4. Write a program (from scratch) named **cubscout.cpp** that uses a structure named `CubScout` to store the following information:
- name of the cub scout (string)
  - the grade in school the cub scout is in (int)
  - the name of the den that the cub scout is in (string)
- a. Ask the user for the number of cub scouts in their pack.
  - b. Then, call a function called `makeArray` that will accept the number of cub scouts as a parameter, and return a pointer to a dynamically allocated array of `CubScout` variables.
  - c. Then, call the `enterCubScouts` function, which will accept the pointer to the allocated array and the number of cub scouts. Use a for loop to enter the user's data for each cub scout in the array.
  - d. Then, call the `printCubScouts` function, which will print out the array contents in a neat, organized way.
  - e. After you complete a,b,c, and d then compile & run your program using the same data as in the sample screen caputre below and then create your own screen capture of your code running. Put your screen capture in a document named **Lesson Set 11 Screen Captures**.

```
Command Prompt
F:\CSC 2100\LAB\LAB 13>g++ cub.cpp -o cub.exe
F:\CSC 2100\LAB\LAB 13>cub

How many cub scouts are in your pack?
3

CUB SCOUT 1:
NAME: Andy Crockett
GRADE (1-5): 4
DEN NAME: Webelos I

CUB SCOUT 2:
NAME: Terran Cravens
GRADE (1-5): 2
DEN NAME: Wolf

CUB SCOUT 3:
NAME: Hayden Fittin
GRADE (1-5): 3
DEN NAME: Bear

-----

CUB SCOUT 1:
NAME: Andy Crockett
GRADE (1-5): 4
DEN NAME: Webelos I

CUB SCOUT 2:
NAME: Terran Cravens
GRADE (1-5): 2
DEN NAME: Wolf

CUB SCOUT 3:
NAME: Hayden Fittin
GRADE (1-5): 3
DEN NAME: Bear

-----
F:\CSC 2100\LAB\LAB 13>
```

**What to Turn In: (by Wednesday, April 22, 2015)**

- array\_struct.cpp
- nestedRect\_struct.cpp
- cubscout.cpp
- Lesson Set 11 Screen Captures

**How you will be graded**

array_struct.cpp	20 points	FOLLOWS SPECIFICATIONS / DEFINES STRUCTURE CORRECTLY / CREATES AN ARRAY OF THE STRUCTURE / READS IN DATA CORRECTLY / COMPUTES THE TAXES CORRECTLY / PRINTS INFORMATION TO THE SCREEN CORRECTLY
nestedRect_struct.cpp	20 points	FOLLOWS SPECIFICATIONS / CREATES THREE STRUCTURES CORRECTLY / CREATED THE VARIABLE CORRECTLY / READ IN THE LENGTH & WIDTH / COMPUTES AREA & PERIMETER IN A FUNCTION AS SPECIFIED / PRINTS OUT THE RESULTS VIA THE STRUCTURE VARIABLE
cubscout.cpp	45 points	FOLLOWS SPECIFICATIONS / CREATES THE STRUCTURE CORRECTLY / DYNAMICALLY ALLOCATES & DELETES AN ARRAY OF CUBSCOUT STRUCTURE / CREATES FUNCTIONS CORRECTLY / ALLOWS USER TO ENTER INFORMATION CORRECTLY / PRINTS INFORMATION CORRECTLY
Lesson Set 11 Screen Captures	15 points	Three screen captures total (5 points each)
